

Save the Lynx

Did you know there are only 2000 Canada lynx in the US (including Alaska). Canada lynxes main prey is the snowshoe hare and birds and small mammals are also eaten. Other things you are going to see is rarity, habitat and diet, Why it's threatened and how we can save it.

The Canada lynx is super rare in southern and warmer areas but it is stable in colder areas. Canada lynx are mainly found in colder areas which makes it rare in warmer areas like wisconsin. The Canada lynx is very rare and hardly seen in warmer areas. Also how does the rarity of the Canada lynx affect the habitat and diet and how rare is the diet and habitat let's go to the next paragraph.

Canada lynx are mainly found in moist boreal forest also their main prey lives there to the snowshoe hare. The Canada lynx lives in moist boreal forest. The forests are cold and snowy; their main prey lives there. These facts teach us that the Canada lynx lives in moist boreal forests. Those forests are usually cold and snowy; their prey live there too. Still, how is it threatened and how can we save it? Let's go to the next paragraph to find out.

Why is the Canada lynx threatened and how can we save it well? We can save it by protecting its habitat and stop trapping. The Canada lynx can be saved by stopping logging in its habitat and urbanizing how it is threatened because of the reasons above. The Canada lynx is threatened and almost endangered. Those are the facts I have taught you. Finally the conclusion and the end of this story. The conclusion and hopefully you will understand the problem at hand.

In conclusion this medium sized cat is threatened so let's save it before it becomes endangered. If we save this animal we get more cute animals like the bobcat. We should save it because it can drive us to save more land for other animals. If you would like to see these animals in the wild you could help slow down urbanization and logging by spreading the word.
