

Have you ever wanted to meet a real life shapeshifter? Well the Jamaican Iguanas do just that. This species of Iguana has a unique talent in the animal kingdom, being able to change colors. But in recent years, the Jamaican Iguana has been a victim of deforestation. The Jamaican Iguana population has immensely diminished and is near extinction. Without their help spreading seeds around our forests and parks, their extinction could mean the devastation of countless ecosystems. Many major charities and organizations like the Endangered Species Act recommend you to donate towards their fundraisers to help species like this thrive and grow, and I recommend the same.

To begin, the Jamaican Iguana isn't just a reptile with color changing skin. The Jamaican Iguana has an important role in its environment. With a diet that mainly consists of eating fruits and vegetables, digesting seeds is inevitable. When the Jamaican Iguana releases their waste, the waste contains a barrage of seeds that will then help cultivate their forestry environment. Which makes their extinction equivalent to the extinction of whole forests and ecosystems!

Moving on, the Jamaican Iguana species, like many other endangered animals, are victims of the human race. The leading cause of the withering population of the Jamaican Iguanas is because of deforestation. Because of the many adverse actions done by its community and government, this species has now become critically endangered. With many charities working rigorously to refurbish their forests and jungles and make them more suitable towards them, we can only hope they are successful.

Speaking of charities, there are many nonprofit organizations that create an easy way for

people like you to contribute to major problems like this. Organizations like the Endangered Species Act (ESA) have portals where you can donate towards many causes like this. But there are tons of additional ways you can support the Jamaican Iguanas. Actions like planting more trees, taking care of your community, and recycling are all gainful ways to prevent any other casualties like this from ever happening again.

As you can tell, the Jamaican Iguana is an amazing unique species that not only provides a talent that is fun and enjoyable to watch, but a skill that is beneficial towards the world and its many forests. With gifts like this, the Jamaican Iguana is undeniably an unique species that the world needs, but due to deforestation, this species has become critically endangered. Charities and organizations all around the world have been working hard to rescue creatures like this. But we need you to help. Planting trees and taking care of the environment are easy ways to prevent tragedies like this from ever happening again. All in all, the Jamaican Iguana is an amazing species that is a victim of deforestation but with your actions, thousands of species like this can be saved.
